Abstract—This is a template for a survey.

I. INTRODUCTION

The survey paper has max 10-12 pages, double column. Here you first provide a broad introduction to the topic and then a systematic review of the literature, classifying the different approaches based on some meaningful characteristics and providing comparative tables/graphs (either taken from the literature, or produced by your own simulations). Please, refer to any of the publications that you can find in the IEEE Communications Surveys & Tutorials journal for a better idea of the way the paper needs to be organized. There are some examples also in the `examples` folder.

II. CONCLUSIONS
